

ECC2019 Fig.2-style view of our paired stochastic simulation

Training seed 42; episode 15
Realization economic improvement: +0.00906%

Validation disturbance seed 420000; $\alpha = 0.10$; no independent final test.
Negative cost difference favors SAC. Baseline is ours, not ECC2019 naive NMPC.
Archived 1000 steps (0-999 s). X_2 axis 24-30 follows the paper-style scale.
